What's NEXT?

Baker Manufacturing introduces innovative height-adjustable table line

Chicago, Ill. - Baker Manufacturing is unveiling its NEXT product line, the company's newest advancement in motion control and workspace solutions, at the NeoCon World's Trade Fair from June 11-13, 2007, at the Chicago Merchandise Mart. This innovative line of height-adjustable and fixed office tables will be offered exclusively through Herman Miller's distribution channel, and will be shown at NeoCon in Herman Miller's National Design Center, Suite 321 in the Mart, and in Baker's display area on the 8th floor of the Mart in Booth 8-9048.

The unique, patent-pending design of the NEXT tables offers unparalleled versatility, as the legs are independent with no connector bar, and can be attached to any table surface, and spaced apart for different widths, as needed. This design makes the table light and mobile while maximizing legroom and storage room beneath.

With aesthetics designed by Tom Newhouse, the NEXT tables are an artful blend of form and function, yet affordably priced. The clean, crisp lines of the design are visually light in scale and are meant to integrate with Herman Miller's systems products and for private office use.

The NEXT tables permit users to adjust the table height for optimum ergonomic comfort, providing maximum health and productivity benefits in the workplace.

"Ergonomic seating is highly advanced," said Mike Agee, Vice President of Sales and Marketing at Baker Manufacturing, "yet the ergonomic benefits are not maximized because of the fixed height of most work surfaces. Without the correct surface height, people are only addressing half the problem. Adjusting the table height allows the table to work in concert with the chair. This results in a correct, comfortable posture for all individuals including those outside typical height ranges. Simply adding height adjustability to an existing work station will enhance performance and productivity."
